

Membrane Evaluation Systems

About MEMS

MEMS is a spinoff brand from PHILOS; a prominent firm with 20+ years' expertise in membrane production and system design. It is renowned for its capabilities in delivering comprehensive solutions for various kinds of membrane applications. MEMS meanwhile, is now managed by PHILOS's sister firm Wellspring Expand.

MEMS focuses on adopting to customer's mind of work. We have developed our systems which are user friendly and convenient to use. With years of knowledge and experience behind us we are able to offer you the most advanced design and technology in membrane evaluation and manufacturing system. No matter the size, scale, usage or application, all of our customers will benefit from our experts' advice.

MEMS proposal to customers

We have a long history of membrane research, manufacture, and engineering, and we know exactly what goes on in the lab. We have a greater understanding of the difficulties you face as researchers than anybody else, and we're here to help. While working with researchers, we have studied each of them attentively and attempted to comprehend the psychology of researchers. When doing research, we know that ease of use is the most important factor.

We have witnessed that, despite possessing pricey and properly functioning equipment, many researchers nonetheless employ poorly constructed equipment just because they are more comfortable to use. Most of the times, the pricier the system the more complicated it is and the more room it takes in the lab, while needing a lot of cleaning, and are not even suitable for acquiring desired results. As a result, we at MEMS have made it our duty to supply researchers and developers of membranes with the most user-friendly and convenient equipment. In order to overcome even the smallest obstacles, MEMS was established. So, at MEMS, we offer "A device that understands the researcher's mind" by adapting to the user mind of researchers via our years of expertise, observation, and realization. That's what we'd want to put forward to the community of researchers.

Flat Sheet Membrane Evaluation Systems
